Projects and duties

ASP.NET MVC web

Platform which centralizes 25 years of schools, teachers and students' data, allows school and cities organizations to manage student, subsidies, teachers and contracts, generates official documents for the FWB, manages classes and student subscriptions within schools, manages the different layers of management, etc.
Currently in production and used by around 1500 schools and organizations.

ASP.NET MVC web

Development of a centralized platform for the provision and management of vocational training in the field of education. Managers can add structured training, taking into account calendar management, trainers, associated documents, themes or training locations. Users can register for selected or mandatory courses.
The platform currently covers 600 training courses offered for more than 60,000 participants.

ASP.NET MVC web

Complete document management platform (GED) allowing users to manage official documents via defined templates as well as documents proposed by all participants.
The specificities are the ergonomic design of the solution as well as the management by tree structure of documents, their classification and management by keywords.

ASP.NET web

In charge of the finalization and improvement of an ASP.NET web platform which manages Active Directory users and groups, disk and print quotas, etc. and worked in collaboration with different partners such as ComputerLand, Priminfo and the SPW.
The project is still deployed and working in almost 3300 schools in Wallonia.

Mobile development

iOS and Android geolocation applications using Java or Xamarin frameworks.

WinForms desktop applications

Development of LIMS applications that manage stocks and products, laboratories and permissions, orders and receipts, etc. from analysis to production version.

Education and trainings
